

General Notification

From: Northeast Laboratory Services, Quality Department

Date: 2020-04-22

To whom it may concern:

Northeast Laboratory Services (NEL) is notifying customers that the acceptable appearance specification for QA/QC release of m-HPC Agar is changing from:

“Clear” to “Clear to trace haze, may have light precipitates in agar”.

This change will affect the following NEL part numbers:

P6105 m-HPC Agar
P1320 m-HPC Agar

This change will more accurately describe the appearance of the prepared media and will be reflected on the Certificate of Analysis for m-HPC Agar effective on 2020-04-22. This change in appearance will not impact the quality of the media in regards to its growth performance, or other required QA/QC release specifications.

Please note that this change only pertains to the visible appearance of the final product. No changes are being made to the formulation, manufacturing process, or performance testing of the media.

If you have any questions, please reach out to your Customer Service Representative or our Quality Team. We are confident that this change will not affect the integrity of the final product.

Sincerely,

A handwritten signature in black ink, appearing to read 'Jessica Hamilton', with a large, sweeping flourish at the end.

Jessica Hamilton
QA/QC Manager
